The Recycling Experts - Plastic Recycling

Let Your Scrap Plastic Pay You!

Why would you pay a common trash hauler to remove your valuable post-production and obsolete plastic when you could have us pay you for this same material? Depending on the volumes and grades of scrap plastic your facility generates, you could potentially use the revenue you receive from your scrap plastic to significantly offset the cost of your non-recyclable rubbish materials. We will dedicate our expertise and unique market resources to reduce your overall solid waste disposal costs. This is easily accomplished by using your plastic credits to offset the cost of your rubbish removal. Our recycling experts will come to your facility at no charge to educate your operations and material handling personnel in the best practices and time-proven industry methods to realize the most value per load for your scrap plastic materials.

The ultimate goal is to generate enough gross profit on each load to cover the transportation costs and still have a net profit remaining. Many of our customers enjoy such a positive net income from the plastic materials that they previously paid a trash hauler to remove.

Stop Throwing Money Away. . . Call Us Today!

Why continue to lose money when one phone call can start saving you money immediately? How many times last year did you stall making a decision that could have saved your company thousands of dollars simply because you were too busy "putting out fires" in your waste disposal operations? Consider the following example: If you are currently paying a common trash hauler \$20/ton to have a particular grade of plastic removed from your facility and we can remove it, but we pay you \$10/ton, then that would be a net improvement of \$30/ton toward your bottom line. How many tons of money are you throwing away every month?
